

## Vent and Collect Dust in Any Contained Vessel

The Modu-Kleen<sup>®</sup> Series 692 low profile, continuous cleaning bin vent/dust collector is designed to vent bins, storage silos, mixers, blenders, pneumatic conveying systems, or any other equipment to effectively control fugitive dust. It can meet the most stringent of air pollution codes. One major feature allows easy and instant removal of the filter cartridges, when required, without any need

to enter the filter housing itself. Optional electrical controls can be a PLC or a standard solid state control enclosure. The series 692 also employs an efficient method for continuous cleaning of the filter cartridges. It uses a unique patented cone jet diffuser along with back pressure cleaning for optimum performance and lower consumption of the high pressure needed for cleaning.
